

To interact with Candy Crush, press one of the candies to select it and then click on one of the four buttons to the right to swap it the corresponding direction. Every time you make a move, the moves counter will be updated in the top right. If you try to do an invalid swap (swap out of bounds or swap with nothing selected), then nothing happens, it doesn't increment move, and an error message is printed to stdout. We tailored our application after the sample solution, so it should work identically.
